Nilsson Design

Structural Engineer

ART James & Partners

Services Engineer

Mathew Hail

Quantity Surveyor

E C Harris

Contract Period

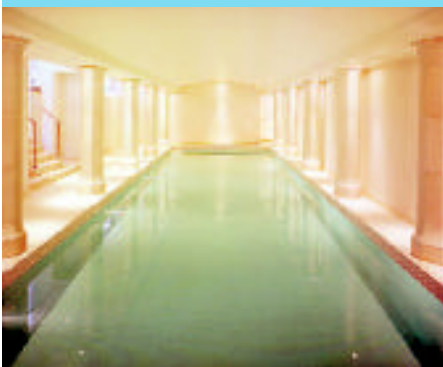

Aug 97 - May 99

Contract Value

£31.85 million

Main Contractor

Carillion Building

The Bromptons Residential project consisted of the construction of two new buildings and the conversion and refurbishment of the old Bromptons Hospital, a Grade 2 listed building.

The new buildings were constructed using traditional methods, clad in both brickwork and stone.

To ensure continuity between the new and existing buildings, the cladding was specially designed to match the exquisite existing facade in both colour and appearance.

In total, the two blocks will provide 73, one to five-bedroom apartments with the larger accommodation being located within the original building. The development also includes secure underground car parking, a 50 ft swimming pool and a gymnasium.

To complete the project, the grounds were fully landscaped.
